

Would you like your students to be set real-life engineering problems?

Aimed at Year 10 and 12 Students working in teams of 4-6, Nissan will set a current engineering challenge.

The teams will be invited to the Plant in late September / October and will be shown the concern.

The students will then return to school to work on the challenge, generate ideas and find a workable solution to the problem, supported by employees from the Plant.

In April / June the teams will be invited back to the Plant to present their final report and findings to a panel of Nissan employees including Engineering and HR professionals.

Nissan Engineering Challenge
